

Harness Technological Innovations in Lighting and Beyond with **Smartvision**[®]

The writing is on the wall. Built-in technological intelligence is on the horizon. LSI Lighting Solutions has not only kept pace with anticipated technological advancements, but has also innovated for future competitiveness. Depend on us to harness the potential of smart LED lighting technology solutions, such as motion/occupancy sensing, timers, daylight harvesting and more with LSI's SmartVision[®] for indoor and outdoor lighting applications.

Technological strides extend far beyond the purview of only lighting, however, and LSI Industries is ready. Its new SmartVision Advanced Retail Solutions capitalize on the overhead locations of our lighting fixtures to also add proximity marketing, indoor navigation, beacons, immersive consumer experiences, individually-tailored couponing/loyalty programs in real time, text messages, electronic shelf tags and interactive digital signage to gas station convenience stores.
